MakeBPM

AI music studio for creators that turns ideas into songs, beats, and soundtracks.

About

MakeBPM is an AI music generator that turns a simple idea into songs, beats, and soundtracks. It is built for creators who want to make music fast for videos, podcasts, games, and social content, with a web studio that also includes tools for editing and reusing audio.

What is MakeBPM

MakeBPM is an AI music studio that helps you create songs, beats, and soundtracks from a single idea. The site positions it as a creator-focused generator for turning prompts into playable music in minutes, with support for both simple and advanced

MakeBPM

Visit ↗

It is more than a one-off music generator. The product also surfaces a set of related audio tools, including BPM Finder, Free Key Finder, Free Chord Progression, Free Audio to MIDI, Stem Splitter, Vocal Remover, and Music Extender. That makes it useful not only for making fresh tracks, but also for working with existing audio assets.

The public site shows a free entry point with 12 credits and says no credit card is required to start. It also notes that the free credits are valid for 7 days.

Key features

MakeBPM combines generation, cleanup, and breakdown tools in one interface.

AI music generator: Create songs, beats, background music, and soundtracks from a text idea.

Simple and advanced modes: The generator UI shows both a simple path and an advanced option set.

Model V5: The interface identifies the current generation model as V5.

Instrumental toggle: The generator includes an instrumental option for non-vocal output.

Preview tracks: You can listen to sample outputs such as “Late Night Drive” before generating.

Track options: The free plan mentions enough credits for 1 generation with 2 track options.

Audio utility tools: The site lists Stem Splitter, Vocal Remover, Music Extender, Audio to MIDI, BPM Finder, Key Finder, and Chord Progression tools.

Lyrics and cover support: The navigation includes Lyrics Generator, Lyrics to Song, and Album Cover.

History: The app includes a history area for past outputs.

These features suggest a workflow that covers both music ideation and post-generation handling, which is useful if you want a music production assistant rather than just a single-purpose song maker.

How to use it

MakeBPM

Open the generator from the homepage and choose the music creation path.

Describe your idea in the prompt box. The site asks you to explain the mood, use case, or concept.

Choose a mode if needed. The interface offers simple and advanced options.

Set generation preferences such as the instrumental option, then review any advanced settings shown in the UI.

Spend credits to generate. The site states that one generation uses 12 credits.

Preview the results and compare the track options returned by the model.

Reuse the output with tools like Stem Splitter, Vocal Remover, or Music Extender when you need edits or variations.

If you are starting from lyrics instead of an idea, the site's Lyrics Generator and Lyrics to Song tools suggest a separate path for vocal-first workflows.

Who it is for

MakeBPM is aimed at creators who need music quickly without starting from a blank DAW session.

Video creators who want background music or opening themes.

Podcasters who need short intros, beds, or transition music.

Game developers looking for loops or soundtrack ideas.

Social content makers who need fast audio for clips and reels.

Independent musicians who want a prompt-to-track sketching tool.

Editors and remixers who need stem separation or vocal removal.

The broader category here is AI music generation, but the app also overlaps with audio editing and music-production utilities. That makes it useful for users who want both composition and lightweight post-production in one place.

What to know before you use it

MakeBPM is web-based, but the public material does not mention desktop apps, mobile apps, or an API, so treat the browser version as the confirmed way to use it.

The free offer is **12 credits**, not unlimited access.

Those credits are **valid for 7 days**, so they are not permanent.

The site says the free amount is enough for **1 generation** and **2 track options**, which is helpful for testing but not for heavy production.

The generator page shows **Model V5**, but the public material does not explain training data, licensing terms, or output ownership in detail.

The examples page shows named sample tracks, but sample quality may not match every prompt or genre.

Also note what the tool does **not** replace. If you need final-clear rights language, publishing metadata, broadcast-safe clearance, or exact musical transcription, use the official documentation or your own production workflow rather than relying on the generator alone. Likewise, if you need highly accurate BPM, key, or chord analysis for release-critical work, verify results with dedicated professional tools.

In short, MakeBPM is a practical AI music studio for idea-to-track generation, but it works best as a fast creative engine and audio helper, not as a substitute for formal music rights review or manual production QA.

FAQ

How much does MakeBPM cost to try? It offers 12 free credits with no credit card required. The site says those credits are valid for 7 days.

What can I create with MakeBPM? You can create songs, beats, background music, and soundtracks. The site also highlights vocal songs, instrumental music, and example tracks.

Can I use MakeBPM in a browser? Yes, the public product appears to be a web app. The material provided does not mention native iOS, Android, or desktop apps.

Is MakeBPM only for full songs? No, it also supports shorter music use cases like background music and soundtracks. The site positions it for videos, podcasts, games, and social content.

Does MakeBPM include editing tools? Yes, it lists audio utilities such as Stem Splitter, Vocal Remover, Music Extender, Audio to MIDI, BPM Finder, Key Finder, and Chord

FAQ

- How many free credits does MakeBPM give new users?
- What kind of music can MakeBPM generate?
- Does MakeBPM work as a web app?
- Can I do more than generate new tracks in MakeBPM?
- Who is MakeBPM best suited for?
